CQ Web Security Filtering

Complete Web Filtering Protection for Small to Medium Businesses

Traditional UTM systems only protect devices inside their networks. CQ Web Security Filtering protection travels with the device protecting your staff everywhere they're working. Safeguard your business with faster, more secure technology.

Five ways CQ Web Security Filtering outperforms other web filtering security

Device-Level Web Filtering
CQ Web Security filters traffic through device-level DNS filtering so your business remains safe and protected in today's world.

Total Endpoint Protection
Traditional UTM systems only protect devices inside their networks, leaving employees outside the perimeter exposed. CQ Web Security Filtering protection travels with the device.

Cloud Based Management
Centrally managed and deployed with a single click, CQ Web Security Filtering eliminates the need to maintain costly hardware. Updates are sent to all protected devices regardless of their location eliminating the need to VPN back into the security perimeter for protection.

Machine Learning Optimization
Capable of learning from each new deployment and scanned site, Filtering self optimizes. Discoveries are then shared to ensure the entire Filtering-protected community of networks benefit.

Better Security Visibility
Through its intuitive dashboard and detailed reporting, CQ Web Security Filtering can provide levels of visibility other systems can't. Monitor logs, track activity, see who did what, when and where.
